Question 12	1 points	Save Answer
Which method of HttpServletResponse is used to redirect an HTTP request to another URL?		
oredirectHttp()		
osendURL()		
getRequestDispatcher()		
sendRedirect()		
Question 13		
Q11) When using a RequestDispatcher, the use of which methods can often lead to an Ans: flush, write	<mark>llegal</mark> StateExc	eption?
Question 14	1 poin	nts Saved
How would you set a header named "CONTENT-LENGTH" in the HttpServletResponse object?		
oresponse.setHeader(CONTENT-LENGTH,"1024");		
oresponse.setHeader("CONTENT-LENGTH",1024);		
response.setHeader("CONTENT-LENGTH","1024");		
oresponse.setStatus(1024);		
Question 6		1 points
Given this code from an otherwise valid HttpServlet that has also beenregistered as a ServletRequestAttributeListener:	l	
10. public void doGet(HttpServletRequest req, HttpServletResponse res) 11. throws IOException, ServletException { 12. req.setAttribute("a", "b"); 13. req.setAttribute("a", "c"); 14. req.removeAttribute("a");		
15. } 16. public void attributeAdded(ServletRequestAttributeEvent ev) { 17. System.out.print(" A:" + ev.getName() + "->" + ev.getValue()); 18. } 19. public void attributeRemoved(ServletRequestAttributeEvent ev) {		
 System.out.print(" M:" + ev.getName() + "->" + ev.getValue()); } public void attributeReplaced(ServletRequestAttributeEvent ev) { System.out.print(" P:" + ev.getName() + "->" + ev.getValue()); } 		
What logging output is generated?		
○ A:a->b M:a->b A:a->c P:a->null		

○ A:a->b P:a->b P:a->null○ A:a->b M:a->b A:a->c M:a->c

○ PUT		
Question 24	1 points	Save Answer
Which statements about listeners are true? Choose three.	1 points	Jave Allswei
A ServletContextListener can be used to perform an action when the servlet context is about to be shut down.		
An HttpSessionListener can be used to perform an action when an HttpSession has timed out.		
A ServletContextAttributeListener can be used to perform an action when the servlet context has just been created and its first request.	is available	to service
A ServletRequestAttributeListener can be used to perform an action when an attribute has been removed from a Servlet	tRequest.	
Question 25	1 poi	nts
Which calls provide information about initialization parameters that are applicable to an entire web application? Choose tw	О.	
ServletConfig.getInitParameter(String)		
ServletContext.getInitParameterNames()		
ServletContext.getInitParameter(String)		
ServletConfig.getInitParameters()		

Question 26	1 poi	nts 🗸 Saved
Which is most logically stored as an attribute in session scope?		
• An object representing a user who has just logged into the system.		
A database connection object used by all web components of the system.		
○ A copy of an initialization parameter		
O A copy of a query parameter entered by a user.		
Question 27	1 poin	ts 🗸 Y Saved
Which are true about the RequestDispatcher interface? Choose two.		
Depending on the class whose method creates a RequestDispatcher, the path to the resource to be forwarded to w	ill change.	
Of its two methods, forward() is used most frequently.		
☐ If your servlet invokes RequestDispatcher.forward, it can send its own response to the client before, but not after the	e invocation of fo	rward.
☐ Its methods take the following arguments: a resource, a request, and a response.
